

Platinum® Xtra 360

Product Overview

PLATINUM® XTRA 360 is a proven new high loaded clethodim formulation from Adama that provides post emergent control of grass weeds in a wide variety of broadleaf crops.

PLATINUM® XTRA 360 provides cost effective control in canola and pulse crops whilst maximising compatibility.

Mode of Action

GROUP A HERBICIDE

PLATINUM® XTRA 360 herbicide is a member of the cyclohexanedione group of herbicides and inhibits acetyl-CoA carboxylase. For weed resistance management, PLATINUM® XTRA 360 is a Group A herbicide. Some naturally-occurring weed biotypes resistant to PLATINUM® XTRA 360 and other Group A herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly.
