Why Warlock ${ }^{\oplus} 19.2$ EC?
Warlock ${ }^{\oplus} 19.2 \mathrm{EC}$ is an insecticide that effectively controls Lepidoptera larvae, including those resistant to organophosphate, pyrethroids and insect growth regulators. By using Warlock ${ }^{\oplus} 19.2$ EC in an IPM programme, the specific pest is targeted and beneficial insects are not affected in any significant way

Is it safe?
Warlock ${ }^{\oplus}$ 19.2 EC is not carcinogenic and has a good safety profile for the user and environment, BUT always follow the safety precautions on the Warlock ${ }^{\circledR}$ 19.2 EC label.
