

# PRODUCT OVERVIEW: FOLPAN® 500C

## Why FOLPAN® 500C ?

FOLPAN® 500C has been shown to provide excellent preventative protection against fungal diseases of grapes, potatoes and tomatoes. It can be used with confidence in conjunction with other fungicides and insecticidal treatments (with some exceptions). It is a suspension concentrate organic-based fungicide with application and control varying by crop type.

## Mixing instructions:

For the crops pictured below, mix the required volume of Folpan® 500 SC with a little water.

**NOTE:** Mix any other products to be added in water separately before adding them to the tank.

Use only as directed on the label : <https://www.adama.com/south-africa/en/products/fungicides/folpan500sc>

## Which crops can FOLPAN® 500 be used on?

FOLPAN® 500 SC fungicide is registered for use on:

Table grapes

Tomatoes

Wine grapes

Potatoes

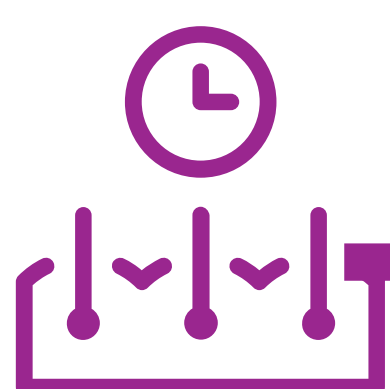

Always read the warnings and directions on the label and follow these with care. Alternatively, contact your ADAMA field team for more information.

## Is it safe?

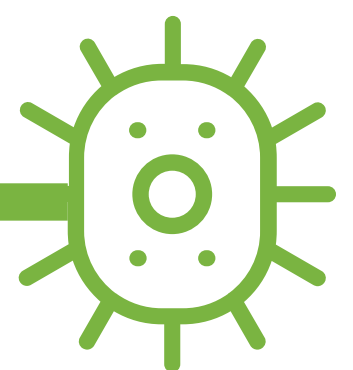

FOLPAN® 500 SC is potentially carcinogenic product that is known to cause allergic skin reactions. It should be used with extreme caution and with all the necessary precautions in place. It is very toxic to aquatic environments with long lasting effects. Avoid release into the environment, wear protective gear, collect any spillage, and dispose of all containers responsibly.

**ALWAYS READ THE LABEL: CAREFULLY FOLLOW USAGE INSTRUCTIONS AND WARNINGS. Find the FOLPAN® 500 SC label here.**
