

ADAMA

REFLECT®

REFLECT® contains isopyrazam for the control of Powdery Mildew and Alternaria in carrots; and Powdery Mildew in a range of protected tomato and cucurbits.

Key Benefits

Outstanding control of Powdery Mildew and moderate control of Alternaria.

Ensures a clean and healthy crop, with strong foliage that can significantly reduce susceptibility to Sclerotinia.

Used as a key part of a pro-active carrot disease control programme, REFLECT® has been proven to:

- Deliver higher yields
- Improve pack-out of quality roots
- Generate significantly higher returns for growers

Product Information

Active ingredients:
125g/L isopyrazam

Formulation:
Emulsifiable Concentrate

Pack size: 10 litres

Crop Information

REFLECT® will work most effectively as a preventative treatment. Application should be ideally timed for when spores have landed in the crop, but before they have had time to germinate and penetrate the leaf. Weather conditions and local disease activity can provide a good indication of disease risk.

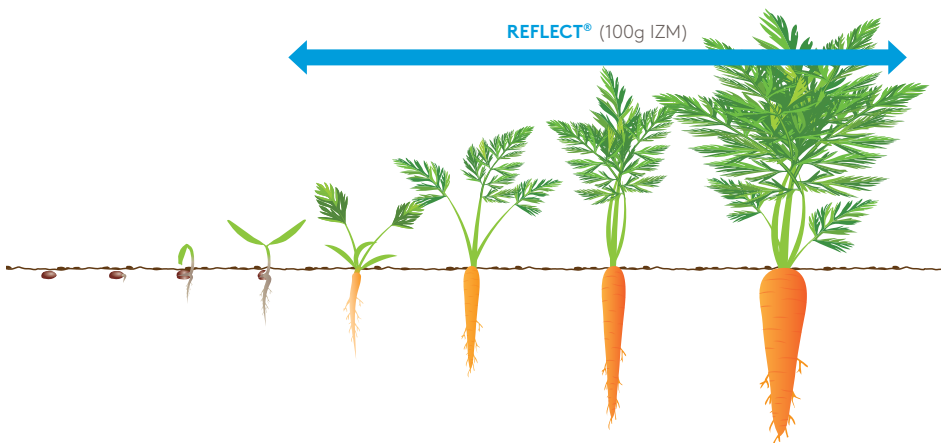

Where there are visible signs of disease already present, REFLECT® will help to stop its spread, and to prevent further infection. That can allow the plant the chance to recover, with the production of clean, disease-free new leaf.

Application Information

Water volume:
Carrots 200-600L/ha
Protected crops 300-1000L/ha

Spray quality: Medium

Aquatic buffer: 5 metres
