MOJAVE® BARLEY

MOJAVE® is a unique multi-site fungicide that provides valuable additional protection against key diseases in barley. MOJAVE® delivers a reliable return on investment through enhanced disease control, and safeguards the efficacy of partner products as part of an anti-resistance strategy.

POWERED BY

MSI Protech

Key Benefits

- Enhances disease control by providing additional activity against ramularia, net blotch and rhynchosporium in barley.
- Key timing to include MOJAVE® in the programme for ramularia control is T2
- Improved ramularia protection by including MOJAVE® at T1 and T2.
- Intrinsic activity on brown rust and mildew.
- Delivers a reliable return on investment by extending green leaf area duration, resulting in higher yields and enhanced crop quality.
- MOJAVE's unique folpet multi-site mode of action makes it the only fungicide which has been proven to extend the effective lifetime of at-risk fungicides by delaying the development of resistance.

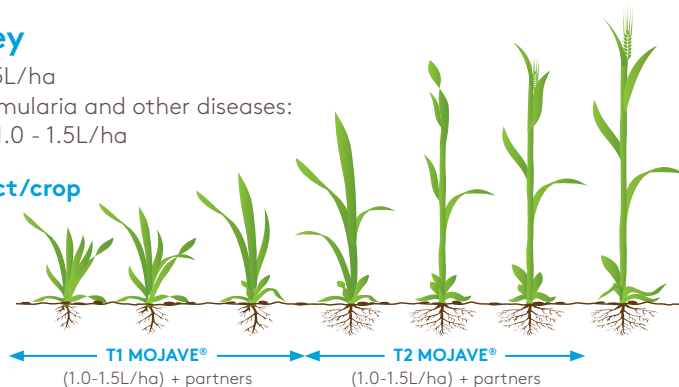

Crop Information

Crop	Max individual dose (L/ha)	Max total dose (L/ha)	Latest time of application
Winter & spring barley	1.5	3.0	Before end of heading/ inflorescence fully emerged (GS 59)

MOJAVE® in barley

- Ramularia: T2 1.0 - 1.5L/ha
- Best guidelines for ramularia and other diseases: T1 1.0 - 1.5L/ha fb T2 1.0 - 1.5L/ha

Maximum 3.0L product/crop

Product Information

Active ingredients:
500g/L folpet

Formulation:
Suspension Concentrate

Pack size: 5 litres

Application Information

Water volume: 200-400L/ha
(Qualified use: 150L/ha or 1% v/v equivalent)

Spray quality: Medium

LERAP: B
